Zutopia Progress Update

Good morning Zucoins Holders,

We are excited to update you on Zutopia's progress.

Over the past few weeks, our teams have been designing and developing the final key features, components and support tools for Zutopia's upcoming release.

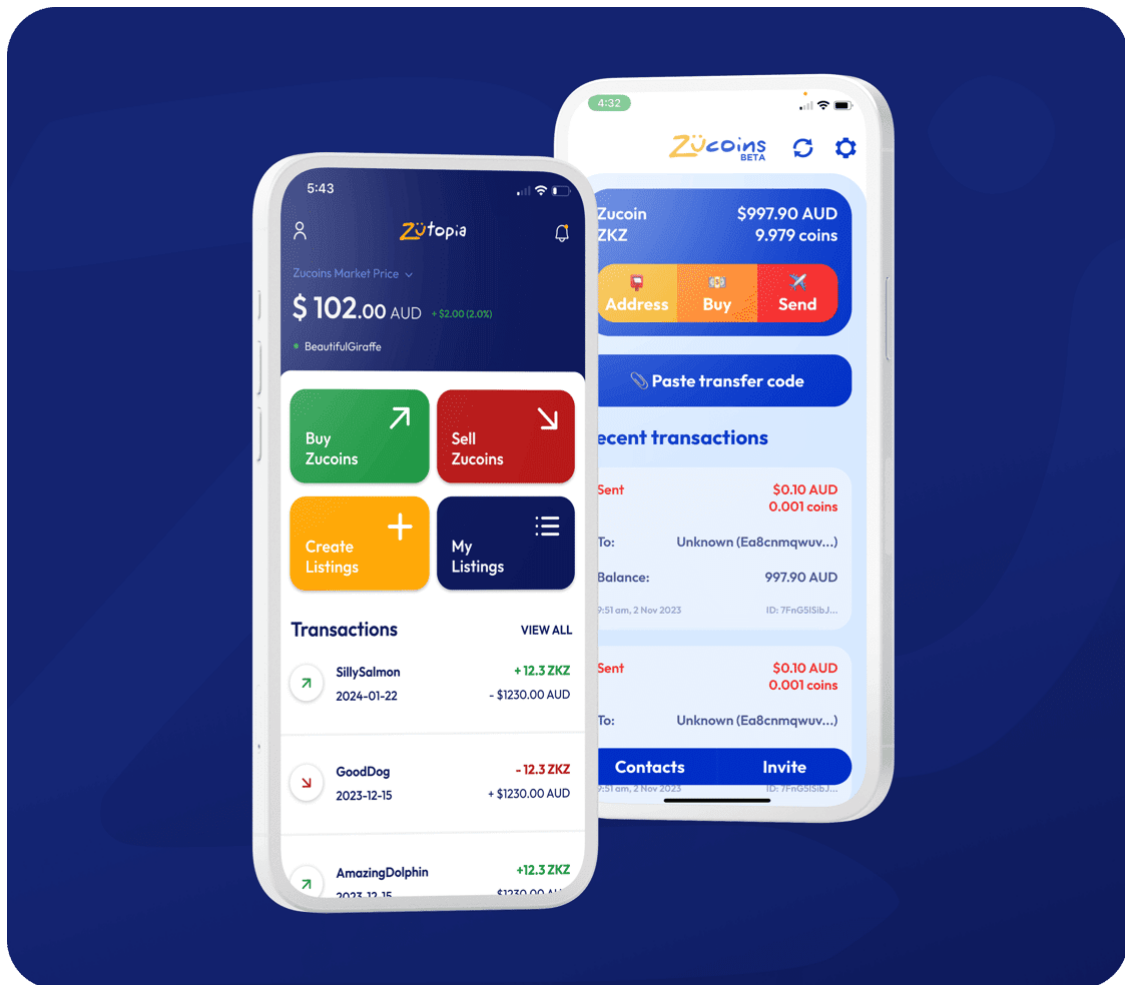

Currently three rounds of testing remain, before we can officially release Zutopia to the public.

Our core objective remains unchanged. The dev team and testers want to complete these last three rounds by the end of June 2024.

In order to closely monitor the live interaction between the Zucoins and Zutopia apps, we have now duplicated the Zucoins / Splitchain network to create a "Sandbox" which can isolate these significant tests. This way, no real Zucoins can ever be lost.

In the Sandbox, we have allocated 30 testers a minuscule fraction of a Zucoin. This 0.00025 fraction of a Zucoin ensures that we can fully test fractional transfers during

round 3.

Round 1: Zutoopia / Zucoins Wallet Verification

Zutoopia requires each users' Zucoins wallet to allow them to trade on Zutoopia.

Importantly at no point does Zutoopia hold your Zucoins or any funds, we only require your Zucoins wallet address as a reference.

In a transaction, the wallet address and the value of Zucoins being transferred are sent to the Zucoins app to facilitate the transfer process. If the wallet address is wrong, the transfer will fail. Resulting in a poor user experience for the both parties involved in the trade.

Over the past week, the smaller group of testers have been testing the process to verify their wallets with Zutoopia.

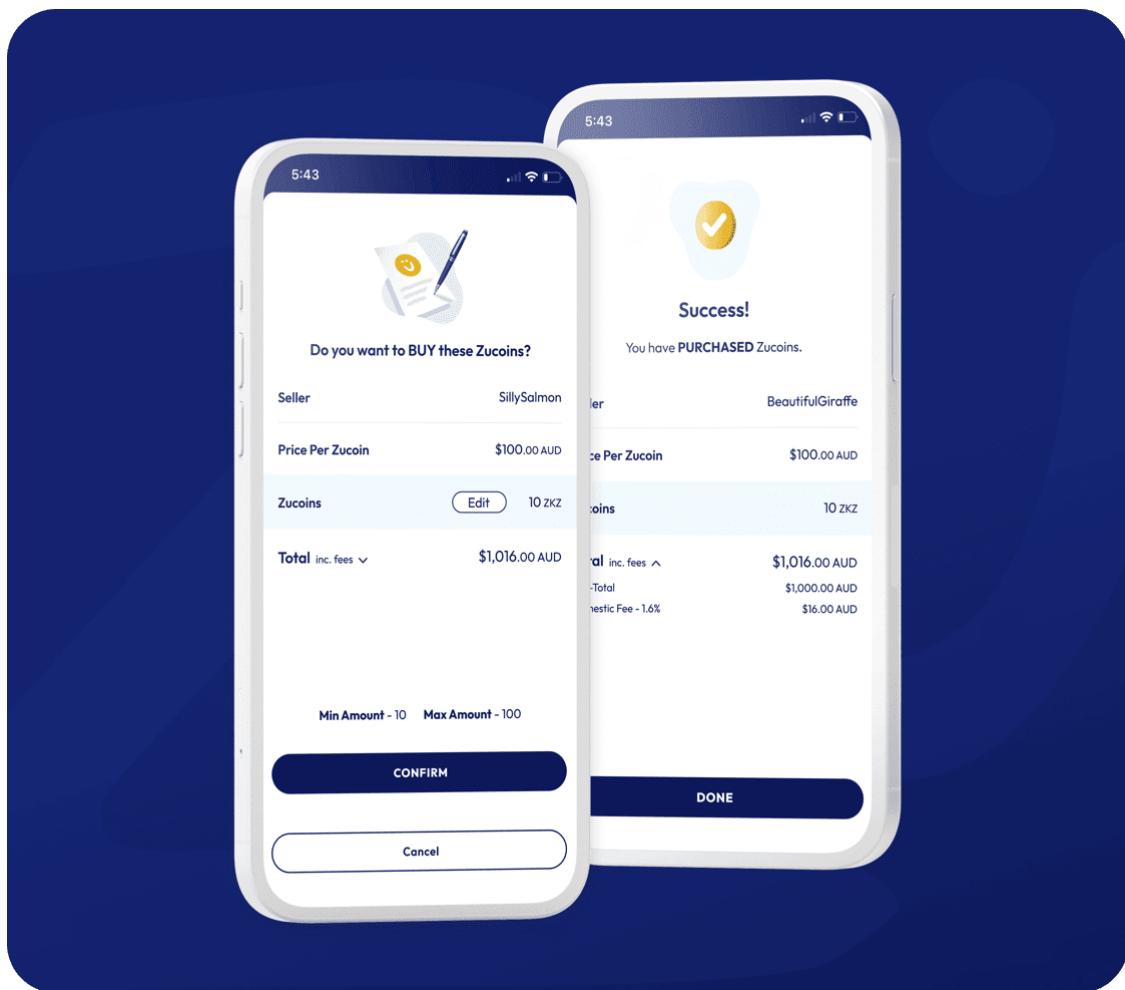

Based on their valuable feedback, we've implemented several enhancements to streamline the user experience and make it as intuitive as possible.

These changes will be published later today, allowing the testers time to test the updates over the weekend.

Pending positive results, this round of testing is will conclude early next week.

Importantly, by using this unique digital signature verification of Zucoin wallets, Zutopia never stores any private or confidential information. Further, when it comes to using your credit or debit cards, only Stripe retains sensitive to satisfy its KYC/AML obligations. Again, Zutopia doesn't retain any such data.

Our mission is to only provide a hosting service where buyers and sellers can post orders and then directly interact with each other offline. As far as we are aware, this type of P2P Marketplace doesn't exist anywhere in the world. Much like the Zucoin/Splitchain network.

Round 2: Partial Fulfilment Testing

Next week, we'll be inviting an additional 250+ testers to evaluate the partial fulfilment feature of Zutopia.

This feature allows users to buy or sell fractions of Zucoins listings listed on Zutopia. This feature provides greater flexibility when it comes to buying or selling small numbers of Zucoins.

For instance, if an order shows that there are 100 Zucoins for sale, then any buyer may purchase a fraction of that order if the seller has agreed to accept a partial sale when the order was created.

Round 3: Zucoins “Sandbox” Network Testing

Immediately after Round 2, our 30 testers will then proceed to conduct live tests in the Zucoins “Sandbox” network.

This simply means that our testers will undergo a rigorous transaction performance test using their 0.00025 fractions of a Zucoin. They will be able to conduct these tests in the knowledge that they can't lose any real and valuable Zucoins. Payments will be made via the Stripe “Sandbox” test network to ensure that all components are harmoniously working together.

This round of testing is crucial if Zutopia is to avoid potential millions of support queries.

Under no circumstances is it's Zutopia's intention to operate a support desk. Zutopia is only a hosted platform. Hence, our objective remains the same as the Zucoins app. Dumb everything down as technically possible for the simplicity of millions of users. Achieving this objective has not been easy. It takes a lot of dev time and testing.

Once these rounds of testing are successfully completed, Zutopia will then be pumped primed for an official launch that will be strongly supported over a number of months by our global mass marketing campaign.

Tutorial Videos and Support

Our support team has also been busy behind the scenes creating intuitive tutorial videos and support pages for Zutopia.

These videos and supporting documentation clearly show all features of Zutopia.

All Zucoin holders must take serious time to learn from these videos and documents. If you don't, then expect to be left behind when it comes to buying or selling your Zucoins.

Zutopia has no intention of providing any support desk. When dealing with a crypto decentralised network like Zucoins/Splitchain, each and every user takes personal responsibility for their Zucoins and interaction with other peers. Zutopia is modelled on that philosophy.

Thank you for your ongoing support and dedication throughout this process.

We're thrilled to be nearing the final stages of development and look forward to bringing Zutopia to life for our users.

Remain patient and simply remind yourself that a dedicated team of hard working developers and testers are working 24/7 in your interests. Their work and dedication doesn't come at any personal or financial cost to you. Just sit back and enjoy the ride as we prepare to awaken the world to the next Gen crypto.....Zucoins.

All the best,
Allan Endresz
